

# AWS Task - 1

1. Create a windows Vm machine in AWS and connect with RDP open CMD in windows share the about system info.

> Step 1: Create an EC2 Instance with Windows as VM.

> Step 2: Connect with Instance and select RDP Client

> Step 3: Get the password, Decrypt it using the .pem file and login to RPD from your local machine using the credentials from AWS

> Step 4: You will see a Windows VM with Hostname, Instance ID, Availability Zone, Network, etc.

> Step 5: To check the machine information go to cmd and type "systeminfo" to fetch the details.
